PROFESSIONAL SUMMARY

Junior Python Developer (MCA) with hands-on experience building backend applications in Python and Django using Django ORM, integrating RESTful APIs (JSON over HTTP), and working with relational databases (MySQL, SQLite, Oracle) through SQL queries covering SELECT, INSERT, UPDATE, DELETE and JOINS. During a trainee stint at Webleesk Infotech, worked across the full software development life cycle (SDLC) on FinTech modules — CRUD operations, REST API integration, authentication and session handling. Comfortable with Git and Git-based workflows, debugging and troubleshooting application issues, and eager to build production Django REST Framework (DRF) applications and grow into Celery, Redis and Docker as part of a backend team.

SKILLS

Languages: Python, PHP, JavaScript, SQL

Backend & APIs: Django, Django ORM, RESTful APIs (JSON, HTTP), Django REST Framework (DRF) concepts, CRUD design, authentication & session handling

Databases: SQL (SELECT, INSERT, UPDATE, DELETE, WHERE, JOINS, GROUP BY, aggregate functions), MySQL, SQLite, Oracle Database, Oracle APEX

Web Technologies: HTML5, CSS3, jQuery, AJAX, Bootstrap, Responsive Design

Python Fundamentals: Data types & data structures, functions & modules, Object-Oriented Programming (OOP), exception handling, packages & virtual environments

Tools & Practices: Git, GitHub, VS Code, XAMPP, DBMS, SDLC, debugging & troubleshooting

EXPERIENCE

Software Developer Trainee | Webleesk Infotech, Chennai

Jul 2026 – Aug 2026

- Worked on financial application modules covering attendance, sales, invoicing, GST and financial statements, using PHP, MySQL, JavaScript, jQuery, AJAX, HTML, CSS and Bootstrap.
- Built out CRUD operations, REST API integrations (JSON over HTTP), SQL database queries, authentication and session handling for the app — directly transferable to designing and implementing REST APIs with Django.
- Worked closely with the dev team to understand requirements and track down bugs as features came together, following established coding standards and participating in reviews.
- Got a real feel for the full development cycle — coding, testing and deployment, not just writing features in isolation.

PROJECTS

Social Media Web Application with Comment Filtering | Independent Project

2026

- Built a social media platform from scratch with Python, Django, HTML, CSS, JavaScript and SQLite — registration, login, profiles, posts and comments all working end to end.
- Added a comment filter that checks posts in real time and blocks inappropriate content automatically, backed by Django ORM for the data layer — practical experience with Python fundamentals, OOP, exception handling and clean, maintainable code.
- Debugged and tested the app across modules to keep it stable as new features were added.

Online Gas Agency Management System | Independent Project

2023

- Built a booking and tracking system for a gas agency using HTML, CSS, JavaScript, PHP and SQL, handling customer bookings, cylinder tracking and day-to-day agency management — basic to intermediate SQL (SELECT, INSERT, UPDATE, DELETE, WHERE, JOINS).
- Used version control (Git) throughout, and kept the UI responsive and simple since the people using it day-to-day weren't technical.

EDUCATION

Master of Computer Applications (M.C.A) | Vels Institute of Science, Technology & Advanced Studies, Chennai

2024 – 2026

- CGPA: 7.67

Bachelor of Computer Application (B.C.A) | Mohamed Sathak College of Arts and Sciences, Chennai

2020 – 2023

- CGPA: 6.8

CERTIFICATIONS

Full Stack Developer | QSpiders Software Training Institute

2023

- Covered HTML, CSS, JavaScript, Bootstrap, Python, Django and SQL, with real-time project experience.

ACHIEVEMENTS

Top 10 Finalist — Xcelerate 2025 Oracle APEX Hackathon

2025

- Finished in the top 10 out of 120+ teams from across India, building and presenting a low-code solution in Oracle APEX.
- Recognized by the organizing committee for the team's performance.
